

# pulper rope

A three strand construction rope specifically designed for the demanding application of re-pulping post consumer waste. The rotation of the pulper forces the rope to the center of the vat where plastic, bailing wire, etc. are entwined in the rope for easy removal with the winch.

# felt pulling rope

A braided outer cover of black filament nylon and natural polyester with a spun nylon, three strand, inner core. This combination offers increased strength, bulk and flexibility for installing both wet felts and dryer felts.

- Available in 200, 300, and 400 foot lengths.
- A combination of white and black in color on the surface for rope identification.
